ProcureGuard

Payment Exception Control Platform

APPROVER TRAINING GUIDE

For reviewers, approvers, controllers, and directors

What this guide covers

- Navigating the Admin Work Queue and dashboard
- Reviewing, approving, and rejecting requests
- Understanding the request detail page (all sections)
- Using Analytics to monitor request activity
- Review Aging and identifying stuck approvals

Table of Contents

Chapter 1 — Getting Started as an Approver

- › 1.1 Your Role and Responsibilities
- › 1.2 What You Can See
- › 1.3 Accessing the Platform

Chapter 2 — Dashboard & Navigation

- › 2.1 Approver Navigation Menu
- › 2.2 Dashboard KPI Cards
- › 2.3 Action Queue
- › 2.4 Recent Activity

Chapter 3 — Admin Work Queue

- › 3.1 Overview
- › 3.2 Queue Columns
- › 3.3 Prioritising Your Review

Chapter 4 — Reviewing a Request

- › 4.1 Opening a Request
- › 4.2 Request Header & Amount Cards
- › 4.3 Review and Decision Panel
- › 4.4 Approval Chain Panel
- › 4.5 People Getting Contacted
- › 4.6 Vendor & Requester Information
- › 4.7 Accounting Section
- › 4.8 Advance Details / Adhoc Details
- › 4.9 Activity Log

Chapter 5 — Making a Decision

- › 5.1 How to Approve a Request
- › 5.2 How to Reject a Request
- › 5.3 After Your Decision

Chapter 6 — Analytics

- › 6.1 Analytics Overview
- › 6.2 Vendor Tables
- › 6.3 Status Breakdown
- › 6.4 Requester Activity
- › 6.5 Review Aging

Quick Reference — Approver At-a-Glance

Chapter 1

Getting Started as an Approver

As an approver or administrator, you play a critical role in ProcureGuard. Every payment exception request must pass through the approval chain, and your timely decisions keep the process moving and financially compliant.

1.1 Your Role and Responsibilities

Your Role	Responsibilities
SCM Manager	First reviewer for Adhoc PO requests. Opens and reviews the exception justification, vendor details, and documentation.
Country Finance Controller	First reviewer for Advance Payment requests at the country level. Reviews financial justification.
Supply Chain Director	Reviews after SCM Manager (Adhoc) or Country Controller (Advance). Supply chain sign-off.
Treasury Director	Reviews Advance Payments for funding availability and timing.
Corporate Controller	Final review for Advance Payments. Checks CFO threshold.

1.2 What You Can See

Unlike requesters (who can only see their own requests), approvers have visibility across the entire platform:

Access	Description
All requests	You can see every Adhoc PO and Advance Payment request in the system, regardless of who submitted it.
Work Queue	A prioritised list of all requests currently at your review step, sorted by priority.
Analytics	Charts, vendor breakdowns, status distributions, and requester activity for all requests.
Analytics	Visual dashboards and Review Aging — showing vendor activity, status distributions, and where approvals are stuck.

1.3 Accessing the Platform

Open any modern browser and navigate to:

<https://scagents.nesr.com/home>

- Click the ProcureGuard card on the home screen to open the platform. You will land directly on the Dashboard.

Chapter 2

Dashboard & Navigation

2.1 Approver Navigation Menu

Menu Item	Description
Dashboard	Main home screen — KPI cards, action queue, recent activity.
My Work	Requests where you are the current owner or have taken action.
Adhoc POs	Full list of all Adhoc PO requests across the platform.
+ New Adhoc PO	Submit a new Adhoc PO request.
Advance Requests	Full list of all Advance Payment requests.
+ New Advance Request	Submit a new Advance Payment request.
Analytics	Visual dashboards — vendor activity, status breakdowns, requester summary, and Review Aging.

2.2 Dashboard KPI Cards

Card	What it shows
Pending Review	Number of requests currently in an active approval step.
Approved	Number of requests that have completed all approval steps.
Total USD Eq.	Total value of all requests normalised to USD.
Adhoc POs	Count and total USD of all Adhoc PO requests.
Advance Payments	Count and total USD of all Advance Payment requests.
Current User	Your name, email, and current access level.

2.3 Action Queue

The Action Queue on the Dashboard shows the **highest-priority submitted and under-review items** across the platform. This is your first view of what needs immediate attention. Each row shows:

Column	Description
Request ID	Unique identifier — e.g. PG-ADV-20260603101125-04
Type badge	Adhoc or Advance
Status badge	Current step — e.g. Submitted, Approval by Corporate Controller
Priority badge	Critical / High / Normal

Amount	Request value in USD
--------	----------------------

- Critical requests are sorted to the top of the Action Queue. Review Critical items first, then High, then Normal.

2.4 Recent Activity

The Recent Activity panel shows the latest workflow movements across all requests — status changes, new submissions, and attachment uploads. Each entry shows the event description, the request ID, the user who triggered it, and the timestamp.

Chapter 3

Work Queue

3.1 Overview

Navigate to **My Work** in the sidebar to access your Work Queue — a full list of all requests currently at your review step. The header shows the total count broken down by Adhoc and Advance.

3.2 Queue Columns

Column / Element	Description
Request ID	Unique identifier with type prefix (PG-ADH for Adhoc, PG-ADV for Advance).
Type badge	Adhoc or Advance — colour coded.
Status badge	Current review step.
Priority badge	Critical (red), High (orange), or Normal (grey).
Vendor / Description	Vendor name and a short description of the request.
Owner info	Who created it and when.
Amount	Request value in the original currency and USD equivalent.
Open Review button	Click to open the full request detail and take action.

3.3 Prioritising Your Review

Use the following order when working through your queue:

Critical	Review first. Large spend or time-sensitive. Delay may block operations.	Open Review immediately.
High	Review within 24 hours.	Open Review as soon as Critical items are cleared.
Normal	Review within standard SLA.	Action when higher priorities are cleared.

■ Requests in the 'Submitted' status are waiting for the very first reviewer to open them. Opening a Submitted request changes its status to Under Review.

Chapter 4

Reviewing a Request

When you click **Open Review** on any request in the queue, you are taken to the full request detail page. This page contains everything you need to make an informed decision.

4.1 Opening a Request

Opening a request that is in **Submitted** status changes it to **Under Review** and records you as the reviewer. The requester receives an email notification that their request is now under review.

■ Once you open a request (moving it to Under Review), you are expected to complete your decision promptly. Leaving requests open without action contributes to review aging.

4.2 Request Header & Amount Cards

The top of the request detail page shows:

Element	Description
Request ID	Unique ID in the format PG-ADH-[date]-[code] or PG-ADV-[date]-[code].
Vendor / description	Who submitted the request and the vendor name.
Go to decision button	Scrolls the page directly to the Approve / Reject panel.
Status badge	Current status of the request.
Priority badge	Critical, High, or Normal.
Original Amount	The amount as submitted in its original currency.
USD Equivalent	Amount normalised to USD using the local FX table.
Created	Date and time the request was submitted.
Updated	Date and time of the last status change or action.

4.3 Review and Decision Panel

The left panel contains the review information and your decision controls:

Element	Description
Current Owner	The role currently responsible for this request (e.g. Country Controller).
Next Action	What step will happen after the current owner acts (e.g. Approval by Country Controller).
Reviewed By	The person who last took an action on this request.
Reviewed At	Timestamp of the last review action.

Rejection Reason	If the request was previously rejected, the reason appears here.
Latest Review Comment	The most recent comment left by any reviewer.
Action Comment field	A free-text field for your comment. Required only when rejecting.
Approve button	Green button — approves the request and moves it to the next step.
Reject button	Red button — rejects the request. You must enter an Action Comment before rejecting.

4.4 Approval Chain Panel

The right side of the page shows the full approval chain for this request. Each step is numbered and shows the stage name, the owning role, and a description. The **currently active step is highlighted in green**. Steps already completed appear with a filled circle; pending steps appear grey.

Example Advance Payment chain:

#	Stage	Owner	Description
1	New Request	Requester	Request created and ready for review.
2	Country Finance Review	Country Finance Controller	Country finance controller reviews the advance request.
3	Supply Chain Director Review	Supply Chain Director	Supply chain director reviews after country controller.
4	Treasury Director Review	Treasury Director	Treasury director reviews funding and timing.
5	Corporate Controller Review	Corporate Controller	Corporate controller reviews and checks CFO threshold.
6	Approved	Workflow Complete	Request is fully approved.

4.5 People Getting Contacted

Below the decision panel, the **People Getting Contacted** section lists the specific individuals who receive email notifications at each step of this request's approval route. It shows their name, email, and role. The current step is labelled **Current Step**.

■ The 'People Getting Contacted' list is determined by the approval chain configuration for the request's country. Contact the ProcureGuard administrator if you believe the wrong people are listed.

4.6 Vendor & Requester Information

Further down the page, the **Vendor and Requester** section displays the full submission details:

Field	Description
Requisition Number	The SAP or internal requisition reference submitted by the requester.
Vendor / SAP Vendor ID	Vendor name and their SAP ID.
Requester	Full name and email of the person who submitted the request.

Country	The country where the payment is being made.
Segment	The business unit.
Additional Request Notifications	Extra emails added by the requester.
Email Test Mode	Whether test mode was enabled for this request (should be Disabled for real requests).

4.7 Accounting Section

Field	Description
Spend Category	Type of spend (e.g. Materials, Services).
Spend Value USD	The request amount in USD.
Payment Terms Days	Number of days until final payment is expected after advance (Advance Payments only).
Credit Limit USD	The credit limit on record for this vendor.

4.8 Advance Details / Adhoc Details

This section shows the requester's justification and any attachments they uploaded. Review these carefully — the **Reason / Justification** is the key piece of information for your decision. Click **Download** next to any attachment to review it.

■ If the justification is insufficient or documents are missing, reject the request and include a clear Action Comment explaining what additional information is needed.

4.9 Activity Log

The **Activity** panel on the right side shows a chronological log of every action taken on this request — submissions, status changes, and attachment uploads — with the user and timestamp for each. This provides a full audit trail.

Chapter 5

Making a Decision

After reviewing all sections of the request detail page, you have two options: **Approve** or **Reject**. Both buttons are in the Review and Decision panel. You can also click the **Go to decision** button at the top of the page to scroll directly to these controls.

5.1 How to Approve a Request

1	Review all sections of the request — vendor details, justification, attachments, and accounting.
2	Confirm the request is justified, complete, and compliant.
3	Optionally, enter a comment in the Action Comment field.
4	Click the green Approve button.
5	The request moves to the next step in the approval chain. The next reviewer is notified by email.
6	If this was the final step, the request status changes to Approved and the requester is notified.

5.2 How to Reject a Request

■ Rejection is permanent for that request. The requester must raise a new request once the issue has been resolved. Always provide a clear and specific rejection reason.

1	Review all sections — identify the specific issue (missing justification, wrong vendor, insufficient documentation, etc.).
2	Click inside the Action Comment field.
3	Write a clear, specific comment explaining why you are rejecting and what the requester needs to correct.
4	Click the red Reject button.
5	The request status changes to Rejected. The requester receives an email with your comment.

5.3 After Your Decision

Scenario	What happens next
You approved — not final step	The next reviewer in the chain is notified. Request moves to their queue. Your work on this request is done.
You approved — final step	Request status → Approved. Requester is notified. Your work on this request is done.
You rejected	Request status → Rejected. Requester notified with your Action Comment. Workflow ends. Your work on this request is done.

Chapter 6

Analytics

The Analytics section (Sidebar → Analytics) gives approvers a comprehensive view of all payment exception activity across the platform.

6.1 Analytics Overview

Six KPI cards at the top of the Analytics page summarise the entire platform:

KPI Card	What it shows
Total USD Eq.	Total value of all requests normalised to USD.
Average USD Eq.	Mean request value normalised to USD.
Vendors	Number of unique active vendors with requests.
Requesters	Number of unique requester emails.
Pending	Number of active approval chain items awaiting action.
Top Adhoc	The vendor with the most Adhoc PO requests.

A **Ranking Order** control lets you sort the analytics tables by Most requests, Highest value, or other criteria. This applies to the vendor, status, and requester lists.

6.2 Vendor Tables

Table	Description
Vendors Overall	Full vendor list with total request count (broken down by Adhoc and Advance) and total USD value.
Vendors That Adhosed The Most	Top 10 vendors by number of Adhoc PO requests, with horizontal bar showing relative volume and total value.
Top Advance Payment Vendors	Top 10 vendors by number of Advance Payment requests, with bar and total value.

■ Vendors appearing frequently in the Adhoc list may need to be onboarded as approved suppliers. Use this data to drive supplier onboarding decisions.

6.3 Status Breakdown

The **Status Breakdown** panel shows the number of requests and total USD value for each status — Approved, Under Review, Cancelled, Rejected, Submitted, and each approval step. This gives an at-a-glance view of pipeline health.

6.4 Requester Activity

The **Requester Activity** panel shows all requesters ranked by number of requests and total USD value. This helps identify unusually high activity from any individual and ensures accountability.

6.5 Review Aging

The **Review Aging** table (Sidebar → Analytics → scroll to Review Aging) shows all **open requests** grouped by review owner and current step, measured from the last status update.

Column	Description
Review Step	The current status badge — e.g. Under Review, Approval by Country Controller.
Owner	The role responsible at this step — e.g. SCM Manager, Treasury Director.
Open	Number of requests currently at this step.
Avg Stuck	Average time requests have been waiting at this step.
Total Stuck	Total combined waiting time across all requests at this step.
Longest	The longest a single request has been waiting at this step — shown in red if overdue.
Oldest Request	The specific request ID that has been waiting the longest, with a link to open it.

■ Longest times shown in orange or red indicate approval steps that are significantly delayed. Use the Oldest Request link to go directly to the stuck request and follow up with the owner.

Quick Reference — Approver

Task	How to do it
See all requests needing my action	Sidebar → My Work
Open and review a request	My Work → click Open Review on any row
Approve a request	Request detail page → Approve button (green)
Reject a request	Request detail page → write Action Comment → Reject button (red)
Go directly to the decision panel	Click 'Go to decision' button at top of request page
See the approval chain for a request	Right panel of any request detail page
Find who is notified at each step	'People Getting Contacted' panel on request detail
See all requests platform-wide	Sidebar → Adhoc POs or Advance Requests
View vendor and spend analytics	Sidebar → Analytics
Find stuck / delayed approvals	Sidebar → Analytics → Review Aging table
Check status breakdown	Sidebar → Analytics → Status Breakdown panel
