ProcureGuard

Payment Exception Control Platform

GENERAL TRAINING GUIDE

For all NESR platform users — requesters and approvers

What this guide covers

- Platform overview and navigation
- Adhoc PO and Advance Payment request types
- Request statuses, priority levels, and workflow
- Approval chain structure
- Getting started and accessing ProcureGuard

Table of Contents

Chapter 1 — Getting Started

- › 1.1 What is ProcureGuard?
- › 1.2 Accessing the Platform
- › 1.3 User Roles Overview

Chapter 2 — Navigation & Dashboard

- › 2.1 Navigation Menu
- › 2.2 Dashboard Overview

- › 6.2 Email Test Mode

Quick Reference — At-a-Glance Task Guide

Chapter 1

Getting Started

ProcureGuard is NESR's internal platform for managing payment exceptions — specifically Adhoc vendor purchase orders and Advance payment requests. This chapter explains what the platform does, how to access it, and who uses it.

1.1 What is ProcureGuard?

ProcureGuard tracks Adhoc POs and Advance Payment requests from initial submission through every stage of review and approval. It provides a single, transparent record of all payment exceptions, replaces manual email chains, and ensures every request follows the correct approval chain before funds are released.

Term	Definition
Adhoc PO	A one-time purchase from a vendor not yet in the approved supplier list. Requires justification and goes through an SCM review chain.
Advance Payment	A payment made to a vendor before goods or services are delivered. Requires multi-level finance and supply chain approval.
Approval Chain	The ordered sequence of roles that must review and approve a request before it can be paid.
Action Queue	A prioritised list of requests currently waiting for your review or action.

1.2 Accessing the Platform

Open any modern browser and navigate to:

<https://scagents.nesr.com/home>

■ Bookmark this URL. The platform works best in Google Chrome or Microsoft Edge. From the home screen, click the ProcureGuard card.

1.3 User Roles Overview

Two primary roles interact with ProcureGuard:

Role	What they can do
Requester	Creates Adhoc PO and Advance Payment requests. Can view and track their own submissions only.
Approver / Admin	Reviews and acts on requests assigned to their role in the approval chain. Has visibility of all requests platform-wide and can access analytics.

■ Your role is assigned at the platform level. Contact your SCM Manager if you need your access level changed.

Chapter 2

Navigation & Dashboard

When you open ProcureGuard, the Dashboard is the first screen you see. A sidebar menu on the left gives you access to every section of the platform.

2.1 Navigation Menu

The sidebar is always visible. Available menu items depend on your role.

Menu Item	Description
Dashboard	Return to the main ProcureGuard home screen with KPI summary and action queue.
My Work	Your personal queue — requests submitted by you or currently awaiting your action.
Adhoc POs	Full list of Adhoc PO requests. Approvers see all requests; requesters see only their own.
+ New Adhoc PO	Open the Adhoc Vendor Purchase Exception Request form.
Advance Requests	Full list of Advance Payment requests. Approvers see all requests; requesters see only their own.
+ New Advance Request	Open the Advance Payment request form.
Analytics	Charts and breakdowns of request volume and vendor activity (approvers only).

■ The active page is highlighted with a green left border and bold text in the sidebar.

2.2 Dashboard Overview

The Dashboard gives a real-time snapshot of all payment exception activity. It is divided into KPI summary cards at the top, an Action Queue on the left, and Recent Activity on the right.

2.3 KPI Summary Cards

Card	What it shows
Pending Review	Number of requests currently in an active approval step.
Approved	Number of requests that have completed all approval steps.
Total USD Eq.	Combined value of all visible requests, normalised to USD.
Adhoc POs	Count and total USD value of all Adhoc PO requests.
Advance Payments	Count and total USD value of all Advance Payment requests.

Current User	Your name, email, and access level.
--------------	-------------------------------------

2.4 Action Queue

The Action Queue shows the highest-priority submitted and under-review items. Each row shows the request ID, type badge, status badge, priority badge, and the value. Click any row to open the full request detail.

■ Tip: The Action Queue is sorted by priority — Critical items appear first. Click 'View status page →' under the Adhoc POs or Advance Payments card to see the full list.

2.5 Recent Activity

The Recent Activity panel shows the latest workflow movements — status changes and new submissions — with the user and timestamp for each.

Chapter 3

Request Types

ProcureGuard handles two distinct types of payment exceptions. Each has its own form fields, approval chain, and compliance requirements.

3.1 Adhoc PO Requests

An Adhoc PO is a one-time payment to a vendor not yet registered in NESR's approved supplier list. The requester must justify why a non-approved vendor is being used.

Key fields on the Adhoc PO form:

Field	Description
Requisition Number *	The SAP or internal requisition reference. Required.
Country *	The country where the purchase is taking place. Required.
Segment *	Business unit (e.g. Drilling, Corporate, E&P;). Required.
Adhoc Vendor Name *	The name of the non-approved vendor. Required.
Vendor Tax ID *	The vendor's tax identification number. Required.
Spend Category *	Category of the spend (e.g. Materials, Services). Required.
Spend Value in USD *	Total value of the purchase in USD. Required.
Reason / Justification *	Why this vendor is being used instead of an approved one. Required.
Attachments	Supporting documents — quotes, approvals, etc. Up to 10 MB each.
Requester Comments	Optional notes for the reviewers.
Additional Request Notifications	Extra emails to receive status updates.
Acknowledgement *	Checkbox confirming this is a one-time vendor. Required.

■ Once you select a Country, the 'People Getting Contacted' section auto-populates with the approvers for that country's approval route.

3.2 Advance Payment Requests

An Advance Payment request is used when NESR needs to pay a vendor before goods or services are received. These require finance and supply chain approval due to the financial risk involved.

Key fields on the Advance Payment form:

Field	Description
Requisition Number *	The SAP or internal requisition reference. Required.
Vendor *	The vendor name or SAP vendor ID. Required.

Country *	The country where the payment will be made. Required.
Segment *	Business unit. Required.
Spend Category *	Category of the advance (e.g. Materials, Services). Required.
Spend Value USD *	The advance amount in USD. Required.
Payment Terms Days	Expected payment terms in days (e.g. 30, 50, 90).
Reason / Justification *	Business justification for the advance. Required.
Attachments	Supporting documents — vendor request, pro-forma invoice, etc.
Requester Comments	Optional notes for reviewers.
Additional Request Notifications	Extra emails to receive status updates.

3.3 Key Differences

Aspect	Adhoc PO	Advance Payment
Purpose	Pay a non-approved vendor	Pay a vendor before delivery
Approval trigger	One-time vendor exception	Pre-payment financial risk
Primary reviewer	SCM Manager	Country Finance Controller
Acknowledgement required	Yes — one-time vendor checkbox	No
Vendor must be in SAP	No — this is the exception	Yes — vendor already exists

Chapter 4

Request Statuses & Priority

Every request carries a status badge and a priority badge. These tell you exactly where a request is in the workflow and how urgently it needs attention.

4.1 Status Types

Submitted	Request has been created and submitted by the requester.	Awaiting first reviewer to open and begin review.
Under Review	A reviewer has opened the request and is actively reviewing.	Reviewer must Approve or Reject.
Approved	All required approvals have been completed.	Finance team can proceed with payment.
Rejected	A reviewer has rejected the request.	Requester is notified. A new request must be raised if needed.
Cancelled	The request was cancelled.	Request is closed with no payment made.

Approval-step statuses — shown when moving through review stages:

Status Badge	Meaning
Approval by SCM	Request is awaiting review by the SCM Manager.
Approval by Country Controller	Request is at the Country Finance Controller review step.
Approval by Supply Chain Director	Request is at the Supply Chain Director review step.
Approval by Treasury Director	Request is at the Treasury Director review step.
Approval by Corporate Controller	Request is at the Corporate Controller review step.

4.2 Priority Levels

Critical	Highest urgency — large spend values or time-sensitive payments.	Review and action immediately.
High	Significant spend or approaching payment deadline.	Review within 24 hours.
Normal	Standard request with no immediate urgency.	Review within standard SLA.

4.3 Status Flow

A request follows this general path. The exact number of approval steps depends on the request type and country:

- At any approval step, the reviewer may Reject the request. A rejection ends the workflow — the requester is notified and must raise a new request if needed.

Chapter 5

Approval Chain

Every request type has a defined approval chain — an ordered sequence of roles that must approve the request. The chain is visible on the right side of every request detail page.

5.1 Adhoc PO Approval Flow

Step	Stage	Owner	Description
1	New Request	Requester	Request created and submitted.
2	Under Review	SCM Manager	SCM Manager opens and reviews the exception request.
3	Approval by SCM	Supply Chain Director	Supply Chain Director reviews after SCM Manager.
4	Approved	Workflow Complete	Request is fully approved and ready for payment processing.

5.2 Advance Payment Approval Flow

Step	Stage	Owner	Description
1	New Request	Requester	Request created and submitted.
2	Country Finance Review	Country Finance Controller	Country finance controller reviews the advance request.
3	Supply Chain Director Review	Supply Chain Director	Supply chain director reviews after country controller.
4	Treasury Director Review	Treasury Director	Treasury director reviews funding and timing.
5	Corporate Controller Review	Corporate Controller	Corporate controller reviews and checks CFO threshold.
6	Approved	Workflow Complete	Request is fully approved.

5.3 Notes

The approval chain displayed on a request detail page shows which step is currently active (highlighted in green). The 'People Getting Contacted' panel lists the specific individuals notified at each step.

- The approval chain is configured per country and per request type. Contact your SCM Manager if you have questions about your country's approval chain.

Chapter 6

Email Notifications

ProcureGuard sends automated email notifications to keep all relevant parties informed as a request moves through the approval chain.

6.1 Notification Triggers

Trigger	Who is notified
Request Submitted	The requester and all approvers in the chain for Step 1 receive a notification.
Status Changed	When a reviewer approves or rejects, the next approver in the chain is notified.
Request Approved	The requester and all notification recipients receive an approval confirmation.
Request Rejected	The requester receives a rejection notification with the reviewer's comment.
Additional Recipients	Anyone added to 'Additional Request Notifications' also receives requester-side status updates.

■ Do not reply to notification emails — they are automated and unmonitored. All actions must be taken inside the ProcureGuard platform.

6.2 Email Test Mode

When submitting a request, a yellow **Email test mode** checkbox is visible on the form. When enabled, emails go only to designated test recipients — actual approvers will not receive them.

■ Leave Email test mode unchecked when submitting real requests. This option is for platform testing only.

Quick Reference

Task	How to do it
Submit an Adhoc PO	Sidebar → + New Adhoc PO → fill form → Submit
Submit an Advance Payment	Sidebar → + New Advance Request → fill form → Submit
Check status of a request	Sidebar → My Work or Adhoc POs / Advance Requests
View the approval chain	Open any request detail page → right panel
See who will be notified	'People Getting Contacted' panel on the request detail page
Track overall activity	Dashboard → KPI cards and Action Queue
Understand a status badge	Chapter 4 of this guide — Status Types table
Find out who to contact	Your SCM Manager
